**Grace Church**-Rev. Geo. C. Abbott, Rector.  
 Morning prayer and sermon at 10:45.  
 Sunday School at 9:30 a. m.

## Feeding Plants.

Do you ever think of inviting your plants to dinner? An expert in plant life who took a large number of sundew plants and supplied half of them with nitrogenous food in the form of roast beef arrived at the following facts: Of the plants that he fed, 69 per cent more survived than of the same number that were not fed in this way; their stems weighed 41 per cent more, they excelled the starved plants in the number of their seeds by 141 per cent, and in the aggregate weight of their seeds by 279 per cent. Other scientists who have fed these plants with aphides of similar small insects have secured like results.

## Daily Thought.

I should never have made my success in life if I had not bestowed upon the least thing I have ever undertaken the same attention and care that I have bestowed upon the greatest.-Dickens.

## SPECIAL TO WOMEN

The most economical, cleansing and germicidal of all antiseptics is

# Paxtine

A soluble Antiseptic Powder to be dissolved in water as needed.

As a medicinal antiseptic for douches in treating catarrh, inflammation or ulceration of nose, throat, and that caused by feminine filth it has no equal. For ten years the Lydia E. Pinkham Medicine Co. has recommended Paxtine in their private correspondence with women, which proves its superiority. Women who have been cured say it is "worth its weight in gold." At drugists. 50c. large box, or by mail. The Paxton Toilet Co., Boston, Mass.

## GERM OF SMALLPOX

Doctor Greeley Claims to Have Isolated Microbe.

Believes They Multiply in Mucous Membrane of Nose at Beginning of Disease and Thence Penetrate Blood Vessels.

Dr. Horace Greeley of Brooklyn reports to the Medical Record that he has discovered the long-sought microbe of smallpox. He found "an apparently identical organism" from the "vesicles of twenty-five cases of successful vaccination, from a like number of cases of undoubted chickenpox, and from five cases of recognized and undoubted smallpox."

From Doctor Greeley's technical description of this new microbe it may be gathered that it is spherical and from 0.3 to 0.6 microns (of 0.000117 to 0.000234 inch) in diameter. It is in the form of multiplying spores, which just before division assume the shape of a figure 8, with a nucleus in each half. These develop into branching masses with spores at the end of the branches.

Doctor Greeley has grown them in cultures. He believes they multiply on the mucous membranes of the nose at the beginning of the disease, and the spores when shed penetrate the blood vessels and are wafted to all parts of the body, "landing in the skin capillaries, where conditions of lower temperature and more light, perhaps, favor further proliferation. In this connection we should remember how the eruption favors the face and hands."

Doctor Greeley concludes that vaccination and variola are identical, the difference being that "vaccination produces a local and at most a lymphatic infection, usually stopped at the nearest chain of glands, and represents the inoculation of an organism directly derived from a different species of animal, and therefore probably of low relative virulence, while smallpox is undoubtedly contracted through the respiratory tract and is due to one derived directly from an animal of like species which, as shown, through spore formation, passes into the blood and is thrown to all corners."

## ARE LOADED WITH THERMIT

Incendiary Bombs Differ From the Ordinary Missile in Character of Their Destructive Power.

Incendiary bombs differ from ordinary explosive bombs in that they are intended not to scatter fragments over a wide area, but to produce sudden and intense heat at a given point, thus starting a fierce conflagration.

W. A. Tilden describes in Nature one of these bombs, a picture of which is reproduced here. His description is as follows:

The bomb, as a rule, is conical, of ten-inch diameter at the base, corded round, and has a metal handle at the

Section of Bomb.

apex (see cut). The base is a flat cup onto which a pierced metal funnel is fitted, having the ignition device and handle fitted at the top. The funnel is generally filled with thermit, which upon ignition generates intense heat, and by the time of the concussion has taken the form of molten metal of the extraordinary high temperature of over five thousand degrees Fahrenheit. The molten metal is spread by the concussion. Outside the funnel is a padding of a highly inflammable or resinous material bound on with an inflammable form of rope. The resinous material creates a pungent smoke.

There is generally some melted white phosphorus in the bottom of the cup, which develops noxious fumes. In some cases celluloid chips are added and occasionally a small quantity of petrol.

## Peculiar Effect of War.

Capt. Eugene Bourassa, a military officer in Montreal, who in private life controls a clothing store, states that the war has caused among his patrons an average expansion of chest measure from 36 to 49 inches. This is true not only of those in active service, but of all the citizens. He explains it on the ground that all the men are mentally and physically preparing for service now or in the future.

## Unsentimental.

"Do you understand the language of flowers?" said the sentimental youth. "No," replied Miss Cayenne. "I don't know that I should care to have my conversation restricted by the aid of vegetation that happened to be in season."

## ADWELL BROS.

### TIN WORK OF ALL KINDS

Roofing, Guttering and Repairing.  
 Plant Bed Steam Boxes.
